Insects Of The Los Angeles Basin (Third Edition)

Synopsis

Updated for the first time in over twenty years, the third edition of *Insects of the Los Angeles Basin* is a beautifully produced and richly illustrated field guide to more than 450 common or conspicuous insects, spiders, millipedes, and other arthropods that inhabit the region. Each species account describes the size and physical characteristics of insects at their adult and immature stages. Entries also incorporate information on habitat, geographic range, behavior, food preferences, nests, noises, and scents even lore of the more notorious species. Color-coded sections organize species by order, and 500 photographs and line drawings help with easy identification. The book's engaging and accessible writing includes introductory chapters that explain the characteristics of insects and the ecology of Los Angeles, back matter for starting an insect collection and suggestions for further reading, and a new preface discussing the tremendous effects of technological advances and citizen science on the field of entomology. Written with the Greater Los Angeles Basin as its focus but useful to residents of the entire coastal area of Southern California from Santa Barbara to San Diego, this book is an invaluable resource for hikers, gardeners, teachers, students, and anyone else curious about the diversity of life in our midst.

Book Information

Paperback: 464 pages

Publisher: Natural History Museum of Los Angeles County; 3rd Revised ed. edition (August 1, 2015)

Language: English

ISBN-10: 0938644440

ISBN-13: 978-0938644446

Product Dimensions: 5.1 x 1.2 x 8.3 inches

Shipping Weight: 12.6 ounces (View shipping rates and policies)

Average Customer Review: 5.0 out of 5 stars 5 customer reviews

Dr. Charles L. Hogue (1935-1992) was the Natural History Museum of Los Angeles County's curator of entomology for thirty years. He was an author or coauthor of more than one hundred scientific and popular articles, as well as four books. Hogue took great satisfaction in sharing information about insects, and this book vividly reflects his talents as a naturalist and a teacher. Dr. James N. Hogue is a research associate at the NHM with a PhD in aquatic ecology from Utah State. He is manager of the biological collections in the department of biology at California State University, Northridge, and is also a part-time lecturer there. Dr. Brian V. Brown is the present curator of entomology at the NHM. He earned his doctorate at the University of Alberta. Through his work he has discovered and described about five hundred new species of phorids.

I've had the 2nd edition for years and was waiting for a new edition. The new color coding of chapters really helps when a fast lookup is needed. Excellent book to have around when that 6-legged (or 8-legged) "friend" appears that you've never seen before.

Beautiful book and a real tribute to Charlie Hogue. I would suggest a better review of the "urban" insect pests such as cockroaches in future editions. There are many new and well-established pest cockroaches in the Los Angeles basin including the Turkestan and smokybrown.

If you have young kids and live in the SoCal area, then this book will turn your backyard into an adventure. Our five year-old takes it to school with her and is learning to read from it.

Helpful book showing many of the insects in LA basin. Great for anyone curious or interested in insects.

Great Book!
