Age Range: 7 - 10 years

Grade Level: 2 - 5

## **Customer Reviews**

Mel Boring is the author of a number of nonfiction picture books, as well as a novel. He lives in Rockford, Iowa, with his family.

Great book for budding entomologists. This book is full of facts, wonderful pictures and projects. There are places to journal things so it's great for kids to really learn about and study different bugs, butterflies, etc. My kids are obsessed with anything entomology right now, so this is a great way for them to capture what they are learning in a book/journal. We also have other books from this same company and love those as well. This is a great series. We love that it's not just about reading facts and stories, but also includes projects, journal pages, etc.

What child doesn't enjoy the flight of a butterfly? And who isn't fascinated by the magical

caterpillar's slight of hand transformation into this wonderful winged creature? This colorful book has it all as well as pictures and details of a myriad of other six legged critters lurking out our front and back doors in our bushes, trees and grasses. Easy to read and drawings are great. And contrary to its author's name, the book is anything but "Boring". I can hardly wait for Mel's book on beetles which I'm sure will be "Boring".

Very well written with beautiful pictures. My 7 year old granddaughter is an outdoor princess who isn't satisfied with merely seeing things - she wants to know what she's seeing & some information about it. This entire series of books does just that. Makes identifying very easy & gives factual information in just the right amount for elementary age children . Highly recommend!

One of the most simple and educational books to help my grandchildren learn about insects and really has helped them overcome their fears of creepy, crawly things. They are interesting, colorful and descriptive books which teaches children how nature really is fantastic.

I also gave this book to a 7 year old boy for his graduation into 1st grade and I have been told that he hasn't put it down. He was so excited to get this book and the one about birds. He is into birds, bugs, and dinosaurs so these books really has helped him with his reading and identifying the different bugs he sees here in Florida.

a fun book to refer to when playing in the yard.

Granddaughter loves it, nicely illustrated

Good teaching tool for a 5 year old.
