# **Biogeography And Ecology Of The Rain Forests Of Eastern Africa**

## Synopsis

Eastern African rain forests are remarkable in their high level of endemism. Miocene uplift of the central African plateau separated these montane and coastal forests from the main Guineo-Congolian forest of west and central Africa. Since then, stable Indian Ocean temperatures maintained a region of high rainfall throughout Pleistocene droughts that devastated forest elsewhere on the continent. Relics of the former Pan-African rain forest survived here, the study of which provides a unique insight into tropical evolutionary processes. This book brings together research on the animals, plants and geography of this intriguing residual forest, and highlights the need for effective management practices to conserve its exceptional biodiversity in the face of increasing pressure for land for cultivation.

## Book Information

Paperback: 352 pages

Publisher: Cambridge University Press; 1 edition (July 31, 2008)

Language: English

ISBN-10: 0521068983

ISBN-13: 978-0521068987

Product Dimensions: 7.4 x 0.8 x 9.7 inches

Shipping Weight: 1.4 pounds (View shipping rates and policies)

## Customer Reviews

Review of the hardback: '... an extremely useful reference for students of African bio-geography.'  
Journal of Animal Ecology

The relics of the former Pan-African rain forest which have survived in East Africa provide a unique insight into tropical evolutionary processes. This book brings together research on the area's animals, plants and geography, and highlights the need for effective management practices to conserve its exceptional biodiversity.
