## Customer Reviews

"Levinton's book is easy to follow yet challenging and is at a perfect level for undergraduate biology majors." --Jayson Smith, California State University, Fullerton "Highly enjoyable to read. Levinton's writing is engaging and approachable. I am impressed by his ability to weave in examples that support the concepts. The book provides greater breadth of coverage than comparable texts, and the description of climate change is excellent and current." --Fiona M. Harper, Rollins College "There is a nice use of specific experimental examples to illustrate concepts. The inclusion of new

data on climate change and ocean acidification, along with the new examples of fisheries and aquaculture biology, are very much appreciated." --Karen Martin, Pepperdine University

Jeffrey S. Levinton is Distinguished Professor of Ecology and Evolution at Stony Brook University.

It's an interesting and engaging book. It gives lots of details, examples, and pictures but it isn't overwhelming.

It made marine bio more enjoyable

This book was a good choice and it will be very useful. I recommend for all customers interested by the ocean

I used this book for a class, and really enjoyed reading it. I also love that it's a paperback - much more lightweight and (hopefully) helped bring the price down.

Just as described, thank you. I would order this again.

Required textbook - I'm not personally interested

Great condition! Great price!

The pages came out the first day I opened it!
